

# MKU LNA 432 A, Selective Low Noise Amplifier

432.2 MHz

## **Selective Super Low Noise Preamplifier**

#### Description

This selective super low noise preamplifier uses the latest PHEMT transistor technology from Agilent. Due to his high technical performance - low noise figure, high gain and very high IP3 - this is the ideal preamplifier for contest operation as well as EME, Meteorscatter, Aurora and tropo DX.

### Features

- Low noise figure and high gain
- Helical filter (432 MHz) for good selectivity
- High IP3 ideal for contest operation
- Unconditionally stable no parasitic oscillations in case of poor antenna match
- Milled aluminium case

### Applications

- Contest operation
- EME (Earth Moon Earth)
- Meteorscatter
- Aurora
- Tropo DX

## Important notes

- Amplifier does not contain a coaxial relay!
- Maximum input power 1 mW
